John Storella discussed the claimed invention and proposed amendments to the independent claims, which would overcome the current rejections under 35 USC 102. Mr. Storella further pointed out that applied prior art, Bergstrom et al. is directed to surface plasmon resonance and that the instantly claimed invention is directed to a probe for a mass spectrometer.

The Examiner reminded the Applicants that any substantial changes to the claims would require further search and hence no definite agreement on patentability could be reached at this time.

The Applicants are not required to provide the substance of the interview in writing.
